

# Seasonal installation

*Additional charges in effect from  
Dec. 1 through March 31.*

For your convenience, we offer year-round service installation. Installation prices are based on normal construction conditions. Additional charges for electric and/or natural gas installations apply from Dec. 1 through March 31.

## Why seasonal charges?

### Site conditions

- Mud, ice and frost make it harder to move equipment around.

### Working conditions

- Shorter daylight hours, less time for crews to work.
- Additional wear and tear on equipment and vehicles.

### Weather conditions

- Colder temperatures, as well as snow, rain, sleet and brisk wind chills, make schedules less predictable.

To **avoid** these charges, we offer two installation options:

**Option 1:** The completed and signed Ready for Service card(s) for electric and/or natural gas service needs to be submitted to We Energies on or **before Nov. 30**. By submitting the card(s), you are verifying that all service requirements have been met.

OR

**Option 2:** Submit your application for service **after March 1**.

To keep you on schedule, it is very important to have your site ready when we arrive to install your service. Your site is ready for electric and/or natural gas service after you complete all of the following:

## **Electric and natural gas ready for service requirements**

- Locate, mark or expose any buried obstructions or underground facilities – such as a well or underground yard lighting – with stakes, spray paint or flags.
- Clear a minimum 10-foot-wide path along the service route from the property line to the meter location. Please make sure items such as dirt piles, dumpsters and construction materials are not on the path.
- Have the ground around your home/building and along the service route within four inches of final grade.
- We Energies must receive your:
  - Signed sketch (if applicable)
  - Payment (if applicable)
  - Permits and easements

## ***Additional natural gas ready for service requirement***

- Desired meter location must be marked on a foundation wall or a built/framed wall with a flag, stake or spray paint.

## ***Additional electric ready for service requirements***

- Install meter socket at agreed-upon meter location.
- Electrical inspection must be received before the service can be energized.

## **Final ready for service installation requirement**

- Please fill out and return your electric and/or natural gas Ready for Service form(s) to We Energies.

After we receive your Ready for Service form(s) and all other requirements are met, we will schedule the installation. If applying for both electric and natural gas service, your installations may be scheduled separately. The electric service will not be energized until payment and municipal inspection are received.

***NOTE: In early spring, weather conditions, road weight restrictions and a work backlog may create installation delays.***
