

July 31, 2018

Notice to Residents:

Mill Street from East Madison Street to the north termini AND Cleveland Street from Mill Street to Hendricks Street will be closed to through traffic beginning Monday, August 6 until approximately late October for the reconstruction of underground utilities and street resurfacing.

The general contractor for this project is Forest Landscaping & Construction, Inc. from Lake Mills, Wisconsin. There will also be a number of subcontractors working at various times during the project. Construction activities will include sanitary sewer, water main and storm sewer installation, roadway excavation, curb and gutter installation, sidewalk installation on the south side, curb ramp installation, roadway reconstruction and restoration of disturbed areas.

Reconstruction of a street will be inconvenient at times. There may be short delays throughout the day, but driveway access will be maintained when possible. At the end of each construction day, access to driveways and properties should be restored when possible. The contractor and City staff will communicate with local police and fire departments to ensure that emergency access is continuous. Residential trash and recycling pickup will not change but may occur very early in the morning to minimize congestion during construction hours.

An inspector will be onsite to monitor the construction progress and will be available to assist with access, schedule or any other questions during construction. If you need additional assistance, please contact me at your earliest convenience.

Thank you for your cooperation and patience during this construction project.

Kindest Regards,
KUNKEL ENGINEERING GROUP
