**Re: Mill & Cleveland Street Utility
Improvements Update**

Overview

- **Project is a little behind schedule.**
- **Mill and Cleveland street are closed for through traffic.**
- **Picture to the Right is looking at a Sanitary Manhole Structure.**

Good Afternoon All,

The project is progressing well despite more rain and wet conditions. This week, the contractor worked on some of the deepest excavations on the project. The intersection of Mill and Cleveland had a sanitary sewer main depth of over 15 feet deep. The depth of the trench and complexity of the intersection was very challenging for the contractor. It was a positive note to complete the sanitary structure at this location and have it backfilled prior to the end of the week. Patients from the Residents in this area was greatly appreciated during this phase.

The schedule for next week is to continue installation of the sanitary sewer main from the intersection of Mill St and Cleveland St south towards Madison St. The crew will then switch to water main on Mill St starting from Madison St. The other crew will finish the sanitary sewer main on Cleveland St. and then switch back to the Watermain. Watermain will be installed on Cleveland St. from the culverts to Mill St.

If construction goes well this week, then Cleveland St. watermain may be ready for safe water testing before the end of the week. If the watermain tests ok, then water services will begin to be replaced.

Should anyone have any questions, please feel free to call and speak with the onsite inspector, Dean Hefter, or contact the project manager Mitch Leisses. Our contact information is provided below.

Let's work together and make this a successful project for the City of Waterloo!
